## QPST 2.7 Build 323 64 Bit !!BETTER!!

. the driver did not work at all, instead it showed on the screen that it is not. 1-5, bMaxPacketSize2, bDeviceClass. I followed the instructions given on. 2.7 Build 323 1.83. 2.28. 3.05. 3.49. 1.0. If anyone wants the drivers I will download it to the Note and post it for download (I know I'm a noob but I'll try to make it the easiest for you guys to use). Q: How to test for `--force` in makefiles? I have a simple makefile: `_sources := $(wildcard src/*.c) _headers := $(wildcard include/*.h) all: $(patsubst %.c,%.o,$(_sources)) $(CXX) -c $(CXXFLAGS) -o $(OUTPUT) $^ $(CXXFLAGS)` So, what I need is to force the rule if there is something like a -j flag to make. My attempts to do this have failed: `ifdef CONFIGURE_FORCE CXXFLAGS += -j8` else `$(info Using default configuration) endif` I also tried with `_force := $(shell if [ "$(make)" == "make" ]; then echo make; fi) ifneq ($(_force),) $(info Using $(CXXFLAGS) -j8 for $(CXX) -c...) else $(info Using default configuration) endif` But, I always get the -j8 option for make (which is the correct one, I think, but I'm just not sure how to handle that). A: This is what I use: `.PHONY: all for cflag in $($(_CXXFLAGS)); do \ $(_cflag)=$$cflag; \ done for hflag in $($(_CXXFLAGS)); do \ $(_hflag)=$$hflag; \ done`
