Wandering Spider Screensaver

A beautiful illustration of the "wandering spider" is shown on the computer's desktop screen. This screensaver can be the subject of many discussion topics. When you run the screen saver, a wandering spider will move on your screen and try to move towards the mouse pointer. When it comes near the mouse pointer, a new hole will appear on the screen. Try to move the mouse cursor to see what happens. Disclaimer: We are not responsible for the content of the pages to which we link. I would like to return promises from the first value in the array that are resolved. [2]=>Promise {} I've tried using.reduce() like this: this.data.reduce((result, promise) => Promise.resolve(result), Promise.resolve()) But this doesn't work. A: You're making it too complicated. Just resolve the promise of the first element of the array using the then method: this.data.reduce((promise, data) => Promise.resolve(data.then(data => promise)), Promise.resolve()) In your case it's going to be: this.data.reduce((promise, data) => promise.then(data), Promise.resolve()) Q: How do I secure a non-standard server behind an Apache2 server on Ubuntu? A couple of years ago, I set up a small server on my machine, running Ubuntu 10.04. On that box, I installed apache2 and sshd. I also installed tomcat. At that point, I had no users on the box and it was perfect for web development. I now have a user account on that box, but for some reason I didn't set up the apache2 and sshd

What's New in the Wandering Spider Screensaver?

Heidi is a live wallpaper. It is designed to look as if the walls are moving, and as if you are viewing the wall through a window. It consists of three separate views. Each has a movable window, and the other two views are designed to move in relation to each other. Description: Heidi is a live wallpaper. It is designed to look as if the walls are moving, and as if you are viewing the wall through a window. It consists of three separate views. Each has a movable window, and the other two views are designed to move in relation to each other. Description: The Moby Dick Live Wallpaper brings to life the epic novel by Herman Melville. This wallpaper was created in the style of classic Walt Disney animations. The whale walks the line between life and death as it feeds on a village of nautical ships.
